

SaaS & CRM Solutions for Boxing Gyms and Combat Sports Studios: Market & Competitive Landscape 2026

Executive Summary

Vertical SaaS and CRM platforms tailored to gyms and combat sports studios sit inside the broader club and gym management software market, which is forecast to grow at roughly 11–12 percent CAGR into the early 2030s. Combat sports-specific tools (boxing, MMA, Muay Thai, BJJ) are a distinct subsegment positioned against generic gym management and all-in-one fitness CRMs, with vendors differentiating through belt tracking, fighter progression, and community features.^{[1][2][3][4][5][6][^7]}

This report focuses on SaaS and CRM solutions relevant to boxing gym owners, mapping key competitors, product feature sets, and broader market dynamics. It draws primarily from vendor documentation, industry comparison articles, and market research published through 2026.^{[8][2][5][6][7][1]}

Market Size and Growth

Overall gym and club management software

Multiple market research firms estimate that the club management and gym management software market will reach between approximately 10 and 25 billion US dollars by 2030–2033, with mid-double-digit annual growth. One report on fitness, club and gym management software states the market was valued at about 6.8 billion dollars in 2025 and is projected to reach around 17.4 billion dollars by 2034, implying a CAGR close to 11 percent. A separate club management software report expects the market to reach roughly 10.5 billion dollars by 2030, again with an 11–12 percent CAGR, while another estimates club management software could reach about 24.5 billion dollars by 2033 from around 9.1 billion in 2026.^{[3][4][7][8]}

Technavio's analysis of the gym management software market projects absolute growth of around 155 million dollars between 2024 and 2028, with an estimated CAGR of about 10.9 percent across gyms, health clubs, and sports facilities globally. Taken together, these data points indicate a structurally growing, under-penetrated category that is benefiting from rising health consciousness, increasing numbers of fitness facilities, and a shift from manual spreadsheets to cloud-based tools.^[^7]

Vertical combat sports and boxing segment

Within this broader market, the vertical segment for combat sports (boxing, MMA, Muay Thai, BJJ, wrestling, kickboxing) is comparatively small but growing as gyms look for software that understands belt systems, gradings, and fighter progression. Several vendors explicitly position their platforms for combat sports or martial arts rather than generic fitness, suggesting a viable niche rather than a purely horizontal solution space. Although there are no

widely published standalone market-size numbers for boxing-only SaaS tools, martial arts software directories and comparison sites list dozens of products, implying a fragmented but active competitive field.^{[9][10][11][2][5][6][12][13][^1]}

Customer Needs of Boxing & Combat Gyms

Operational and administrative needs

Combat sports gyms typically need to manage complex schedules across disciplines, skill levels, and coaches, with recurring memberships and class packs layered on top of drop-in options. Owners struggle with manual tracking of attendance, gradings, and performance, along with chasing late payments and handling family memberships for youth programs. Software vendors in this niche highlight pain points such as juggling multiple class types and age groups, communicating last-minute schedule changes or events, and building retention in a sport with inherently high churn.^{[2][6][^1]}

Payment automation and recurring billing are core requirements, as much of the gym's revenue comes from monthly memberships and long-term contracts. Cloud-based club management software providers note that integrations with gateways like Stripe, support for recurring billing, and handling event fees are crucial to reducing admin overhead and improving cash flow.^{[1][2]}

Member experience and CRM needs

From a CRM perspective, boxing and combat sports gyms need centralized member profiles, attendance histories, ranking or belt progression information, and communication tools for reminders, promotions, and retention campaigns. Vendors emphasize features such as automated SMS and email for class reminders, cancellations, belt testing notices, and event updates, which are directly tied to improving member satisfaction and loyalty.^{[5][6][2][1]}

FitHive, a fitness-oriented CRM used by boxing gyms, explicitly markets itself as “all-in-one software + marketing” that connects website, scheduling, CRM, and billing so gyms can run packed sessions, convert trials, and keep members training. This highlights another core need: joining CRM data to marketing and funnel tools (lead capture from website, conversion tracking from trial to member, and nurture campaigns) to grow memberships.^[^14]

Competitive Landscape Overview

Categories of solutions

Competitive offerings relevant to boxing and combat sports gyms fall broadly into three categories:

- **Combat sports-specific gym management platforms:** Solutions built primarily for martial arts and combat gyms, with functionality such as belt tracking, fighter progression, grading, and family memberships (e.g., Clubworx combat sports management, CornerMan, specialized dojo management tools).^{[10][13][2][1]}

- **Generic gym management software with combat sports use cases:** Larger horizontal players offering modules and workflows suitable for combat gyms but not exclusively focused on them (e.g., Mindbody, Glofox, ClubReady, Zen Planner, ABC Fitness, Virtuagym, WellnessLiving, etc.).^{[6][8][5][7]}
- **Fitness CRM and marketing-led platforms:** Systems that emphasize CRM, automation, marketing funnels, and websites, with combat or boxing gyms as one of several target segments (e.g., FitHive, gym CRM tools spotlighted in comparison articles).^{[15][14]}

Martial arts software directories and review platforms such as G2 and Capterra list many vendors across these categories, with filters for martial arts, boxing, and combat sports indicating active demand from these gym types.^{[11][12][^9]}

Representative vendors

Key players or representative vendors in this niche include:

- **Clubworx (Combat Gym Management Software)** – All-in-one platform explicitly positioned for combat gyms and MMA facilities, emphasizing scheduling by belt and discipline, flexible memberships and billing, attendance and fighter progression tracking, automated messaging, and performance reports.^{[2][1]}
- **FitHive (Boxing Gym Software)** – Marketed as all-in-one fitness CRM plus marketing stack for boxing gyms, integrating website, CRM, marketing automation, programming, membership site, and billing.^[^14]
- **CornerMan (Gym Manager App)** – Mobile-first management platform built for martial arts academies and combat sports gyms (BJJ, Karate, Muay Thai, MMA), focusing on schedule management, rank promotions, and member management.^[^10]
- **Generic gym software with combat sports support** – Horizontal products like Mindbody, Glofox, ClubReady, Zen Planner, Virtuagym, ABC Fitness, WellnessLiving, etc., which appear in gym management and martial arts software comparisons as options for BJJ, judo, boxing, MMA, karate, and taekwondo schools.^{[11][5][6][7]}
- **Martial arts-focused platforms** – Various boutique platforms highlighted in comparison pieces (e.g., PushPress martial arts edition, 1club, Gymdesk martial arts CRM), which provide belt tracking, family billing, attendance, and communication tailored to dojos.^{[5][6][^15]}

Feature Set Analysis

Core gym management and SaaS features

Across combat sports-oriented and generic platforms, recurring patterns include:

- **Membership management with recurring billing, class packs, trial passes, and event fees.**^{[6][1][^2]}
- **Class scheduling with support for complex timetables by discipline, belt level, age group, and coach availability, plus online booking and waitlists.**^{[1][2][^6]}

- Attendance tracking and reporting for members and fighters, often including progression dashboards.^{[2][5][^6]}
- Integrated payments via gateways like Stripe and other providers, with automated billing and renewals.^{[7][1][^2]}
- Member portals or mobile apps for self-service booking, payments, and schedule viewing.^{[10][6][^2]}

Clubworx highlights class scheduling, flexible membership plans, automated payments, attendance tracking, automated messaging, and insights into performance as its key pillars, specifically framed around combat gyms and fight disciplines. CornerMan similarly positions itself as an all-in-one platform for martial arts academies, with tools for schedule management, rank promotions, and member profiles.^{[10][1][^2]}

CRM, marketing, and engagement features

The CRM and engagement layer is where some platforms differentiate most strongly. FitHive's boxing gym software proposition emphasizes connecting website, scheduling, CRM, billing, programming, and marketing (email and text) under one roof so gyms can convert trials and keep members training. Gym CRM comparison content stresses the importance of integrated automation for email, SMS, and campaigns, as well as lead management and pipeline tracking from initial inquiry through membership conversion.^{[15][14]}

Combat sports-specific platforms like Clubworx highlight automated SMS and email reminders for classes, belt testing, and events, positioning this as a tool for stronger fighter loyalty and reduced churn. Martial arts comparisons point to belt and rank tracking, attendance-based promotion rules, and families-oriented CRM (parent-child linking) as uniquely important features for martial arts and youth-heavy gyms.^{[5][6][^2]}

Boxing-specific versus generic features

Few vendors offer boxing-only modules, but many combat sports platforms explicitly call out boxing as one of the disciplines supported, along with MMA, Muay Thai, BJJ, wrestling, and kickboxing. The functional needs of a boxing gym—class scheduling, memberships, payments, attendance, communication, and progression—largely overlap with other combat sports, so vertical differentiation tends to focus more broadly on combat and martial arts rather than boxing alone.^{[13][6][1][2][^5]}

Where boxing gyms may have distinct requirements (e.g., tracking sparring rounds, fight records, or sanctioning body registrations), these are often handled through custom fields or external tools rather than specialized modules in mainstream SaaS products, based on current vendor documentation.^{[1][2][^5]}

Competitive Positioning

Combat sports-specific platforms (e.g., Clubworx, CornerMan)

Combat sports-specific platforms position themselves on domain fit, promising a system that “actually understands your industry” and its demands across multiple disciplines and belt levels. Clubworx emphasizes that it is "tailored" for combat sports, highlighting features such as dynamic scheduling by belt level and discipline, flexible membership plans, attendance and progression tracking, and automated communication designed for fight gyms. Customer stories presented by Clubworx show combat gyms with 400–650 members using the platform to grow without adding admin and to improve retention and community.^{[2][1]}

CornerMan, as a mobile-centered martial arts gym manager, differentiates by providing an app interface optimized for academies, which can reduce friction for smaller or newer gyms that prefer a mobile-first tool instead of a full desktop management suite. These platforms generally compete on ease of use, combat sports-specific workflows, and the ability to scale to hundreds of members while reducing manual tasks.^{[10][2]}

Horizontal gym management suites (Mindbody, Glofox, etc.)

Horizontal gym management software providers compete on breadth of features, integration ecosystems, and brand recognition. They often support multiple fitness verticals—from yoga studios and boutique fitness to big-box gyms—and rely on configuration and add-on modules to match combat sports needs such as belt tracking or family memberships. In martial arts comparisons, some horizontal products are praised for robust billing, marketing tools, and reporting but may require more customization to fully align with combat sports workflows.^{[8][6][7][5]}

For boxing gyms, horizontal platforms may be attractive when owners value multi-location support, advanced analytics, or rich integration with marketing and wellness ecosystems but may feel less "native" to the specific nuances of combat sports compared with dedicated platforms.^{[7][5]}

Fitness CRM and marketing platforms (FitHive, gym CRMs)

Fitness CRMs and marketing-led tools like FitHive focus on combining CRM, website, marketing automation, programming, membership sites, and billing into a single stack oriented around growth and packed sessions. FitHive emphasizes being “fitness CRM software that puts everything under one roof,” explicitly listing CRM, marketing, email and text, programming, website, and membership site as core capabilities.^{[14][15]}

Comparison content on gym CRM software underscores the importance of automated workflows for lead capture, trial conversion, referral programs, and win-back campaigns, which are crucial in high-churn environments like combat sports gyms. These tools compete by promising measurable revenue growth and marketing outcomes rather than just administrative efficiency, although they often include basic membership and scheduling features as well.^{[15][14]}

Market Dynamics and Trends

Cloud adoption and mobile-first tools

Market research and vendor messaging consistently emphasize the cloud-based nature of modern club and gym management software, with deployment models shifting from on-premises to web-based and mobile apps. Combat sports platforms like Clubworx promote mobile access for members and coaches, while CornerMan is explicitly built as a mobile app, reflecting demand for on-the-go management and booking.^{[4][3][7][2][^10]}

Gym management market analyses note that growth is driven by rising numbers of fitness centers, health clubs, and sports facilities, combined with increasing health consciousness and obesity rates which push consumers into gyms. As more facilities digitalize operations, cloud-based SaaS becomes the default expectation even for smaller combat gyms and boxing clubs.^[^7]

Automation, AI, and data privacy

Technavio's report highlights AI-driven features as a trend in gym management software, including smart scheduling, automated communication, and analytics, while also identifying data privacy concerns as a key challenge. Some vendors explicitly mention AI helpers or bots within their platforms that assist with support or workflow management, and customer reviews describe automated reminders and bots as value-add features.^{[2][7]}

For boxing and combat gyms, automation around booking, billing, reminders, and roster updates helps reduce admin load and gives coaches more time on the mats, aligning with vendor claims about cutting admin time drastically. At the same time, gyms must manage data privacy responsibilities, particularly when storing minors' data, medical waivers, or fighter health information.^{[1][2]}

Niche specialization versus platform consolidation

The proliferation of combat sports-specific tools, martial arts platforms, and fitness CRMs indicates niche specialization within the broader club management market. However, market research also points to consolidation trends driven by larger vendors acquiring smaller players and by gyms preferring unified platforms that handle admin, CRM, marketing, and analytics from one place.^{[9][3][4][11][6][5][^7]}

For boxing gym owners, this dynamic creates a strategic choice between:

- Adopting a combat sports-specific system with deep domain features but potentially fewer integrations, or
- Choosing a broader fitness platform or CRM that offers more integrations and scalability but requires configuration to match combat workflows.

SWOT Snapshot for Combat Sports SaaS/CRMs

Strengths

Combat sports-specific SaaS platforms offer tailored features such as belt or rank tracking, grading and progression dashboards, and communication flows aligned with fight disciplines, improving operational fit and user satisfaction. Automated billing, scheduling, and reminders reduce manual admin work, supporting scalability to hundreds of members with minimal staff overhead. Mobile access and member portals improve convenience for students and parents, enhancing retention and loyalty.^{[6][5][10][1][^2]}

Weaknesses

Niche platforms may lack the integration breadth, third-party marketplaces, or advanced analytics capabilities found in larger horizontal suites, potentially limiting data portability and ecosystem connectivity. Boxing-specific functionality (such as fight record management or sanctioning body workflows) is often not deeply embedded, requiring workarounds or external tools. Furthermore, the fragmented vendor landscape means that feature depth and product maturity vary widely across offerings.^{[12][13][9][11][5][6][7][1]}

Opportunities

There is clear opportunity to build or refine SaaS products that fully integrate combat sports-specific features (fight records, match-making, ranking systems, tournament management) with modern CRM and marketing automation tailored to high-churn gyms. Market growth in club and gym management software indicates expanding budgets and willingness to pay for digital tools, while AI-driven features in scheduling, retention analytics, and dynamic pricing could further differentiate new entrants.^{[3][4][5][6][7][2]}

Threats

Key threats include intense competition from horizontal gym management platforms and fitness CRMs, which can undercut niche vendors on price, bundling, or brand recognition. Data privacy regulations and security requirements pose risk if smaller vendors lack robust compliance practices. Additionally, if consolidation accelerates, independent combat sports tools may face acquisition or struggle to maintain market share against well-funded suites.^{[5][6][^7]}

Key Takeaways for Boxing Gym Owners

Boxing gym owners operate in a market where modern SaaS and CRM tools are widely available but vary significantly in domain fit, integration capabilities, and marketing sophistication. Combat sports-specific platforms like Clubworx and CornerMan provide strong alignment with belt-based progression and fighter tracking but may have narrower ecosystems, while broader gym suites and fitness CRMs offer more integrations and marketing features at the cost of some domain specificity.^{[14][6][15][5][7][10][^2]}

Given the high churn typical in combat gyms, prioritizing CRM and marketing automation—such as email/SMS campaigns, win-back flows, and referral programs—can be as important as basic admin efficiency. When evaluating tools, boxing gym owners should assess their needs along three axes: (1) operational fit for combat sports workflows, (2) CRM and marketing capabilities for acquisition and retention, and (3) ecosystem and integrations suitable for their growth plans.^{[15][14][^2]}
