

OXROUND

Early Investor Business Plan

A combat-sports-first operating system for independent boxing, MMA, kickboxing, and martial arts gyms.

Company	Stage	Initial Market	Business Model
OxRound	Live prototype; CRM MVP next	Independent combat sports gyms, starting with Quebec	B2B SaaS + member app + website add-ons

Prepared for early investor conversations · June 2026
This document is for discussion only and is not a securities offering document.

1. Executive Summary & Company Overview

OxRound is building a **combat-sports-first gym operating system**. The company starts with a member app and CRM for independent boxing gyms, then expands into MMA, Muay Thai, kickboxing, Brazilian jiu-jitsu, and broader martial arts operations.

The initial product direction has already been validated through a live user-app prototype built around **G1 Boxing**, a real boxing gym in Vaudreuil-Dorion, Quebec. The prototype demonstrates the member-side experience; the next step is a production CRM and owner dashboard.

- **Problem:** Independent gyms still run large parts of the business through WhatsApp, paper attendance, e-transfer, spreadsheets, and disconnected tools.
- **Solution:** One simple SaaS platform combining member app, CRM, class management, QR attendance, payments visibility, coach notes, and trial follow-up.
- **Beachhead:** G1 Boxing → Quebec boxing gyms → Quebec/Ontario combat sports gyms → North America.
- **Business model:** Monthly SaaS at \$99, \$199, and \$299+/location, plus optional website, onboarding, payments, analytics, and training add-ons.

Company Name	Category	Initial Product	Long-Term Product	Primary Customer
OxRound	Vertical SaaS for combat sports gyms	Member app + gym CRM for boxing gyms	Full combat sports OS — CRM, member app, payments, training intelligence, website add-ons, analytics	Independent boxing, MMA, kickboxing, Muay Thai, and martial arts gyms (50–300 members)

2. Problem, Solution & Product Roadmap

Combat sports gyms are often community-rich but operationally under-digitized. Many owners are excellent coaches and local operators, but their systems are patched together from generic tools and manual habits. The result is lost trials, weak attendance visibility, messy payments, and no shared operating layer for coaches.

Pain / Workflow Gap	Current Reality	OxRound Fix
Trial follow-up	Lost in DMs, texts, WhatsApp threads, or memory.	Lead/trial CRM with status, notes, and follow-up reminders.
Attendance	Tracked on paper, manually, or not consistently at all.	QR check-in and attendance dashboard.
Membership / payment visibility	Status lives in the owner’s head or scattered spreadsheets.	Clean member profiles and payment status.
Class communication	Announcements depend on group chats or word of mouth.	Member app announcements and schedule updates.
Coach notes	Coaches have no shared system for progress/readiness notes.	Coach notes, profile history, and future training modules.

OxRound gives combat sports gyms one system to run the gym and one app for members to engage with training. The product is intentionally vertical: it does not try to become generic fitness software on day one.

Product Architecture

Product Layer	Core Function	Strategic Value
Member App	Class schedule, booking, cancellations, QR check-in, attendance history, announcements, profile, membership status.	Improves member experience, training consistency, gym culture, and retention.
Gym CRM	Member list, lead/trial pipeline, class creation, capacity control, coach notes, payment status, attendance dashboard.	Reduces admin chaos and gives owners cleaner visibility.
Website Add-On	Trial booking, public schedule, events, member portal login, gym brand page.	Turns the website into connected lead capture.
Future Training Modules	Beginner guide, milestones, sparring readiness, fight-camp mode, coach feedback, community/event feeds.	Creates combat-sports-specific differentiation beyond generic tools.

Product Roadmap

Phase	Timeline	Product Milestone	Commercial Goal
Pilot MVP	0–3 months	Production member app + core CRM: login, profiles, booking, QR check-ins, class management, attendance, payment status.	Launch at G1 Boxing and prove real usage.
Paid Beta	3–6 months	Improved UX, lead/trial tracking, coach notes, announcements, membership workflows, onboarding flow.	Convert 3–5 early gyms.
Quebec Rollout	6–12 months	Payments, reporting, website add-on, stronger admin tools, support playbooks.	Reach 10–20 paying gyms.
Ontario Expansion	12–24 months	Multi-location features, analytics, coach permissions, retention signals, richer app.	Reach 50+ gyms and prepare seed.
Combat Sports OS	24+ months	MMA/Muay Thai/BJJ modules, fight-camp mode, community, events, mobile store distribution.	Build category-leading platform.

3. Target Customer, Market Strategy & Competition

OxRound should not start by chasing big-box gyms. The first customer profile is a local independent combat sports gym: **owner-operated, community-driven, 50–300 members**, multiple class types, and enough admin complexity to feel the pain of manual systems.

Market Layer	Customer Type	OxRound Relevance	GTM Implication
Beachhead	Independent boxing gyms in Quebec	Highest founder access, strongest product empathy, easiest pilots.	Direct founder-led selling and in-person demos.
Expansion 1	Combat sports gyms in Quebec/Ontario	Similar workflows: classes, members, coaches, payments, attendance, trials.	Referrals, gym networks, tournaments, coach communities.
Expansion 2	North American independent combat sports gyms	Large enough niche for a strong vertical SaaS business.	Remote demos, content, partner referrals, website templates.

Market Layer	Customer Type	OxRound Relevance	GTM Implication
Long-term	Broader boutique fitness verticals	Only after winning combat sports; avoid becoming generic too early.	Selective expansion, not distraction.

Competitive Positioning

OxRound competes against generic gym management platforms and, more importantly, the owner’s current habits. Early messaging: stop losing trials, stop guessing attendance, stop running the business out of chat threads.

Competitor Type	Examples	Strength	OxRound Position
Generic gym software	PushPress, Gymdesk, Wodify, WellnessLiving, Mindbody	Established products with billing, scheduling, CRM, reporting, support.	Win on combat-sports-native UX, lower adoption friction, and features generic platforms under-prioritize.
Martial arts software	Kicksite, rank tracking tools	Understands martial arts better than general fitness tools.	Win first in boxing/combat sports identity, fight-camp roadmap, coach feedback.
Manual systems	WhatsApp, paper, cash/e-transfer, spreadsheets	Free, familiar, flexible.	Make the cost of chaos obvious: lost trials, missed payments, weak retention, no data.
Custom websites/forms	Wix, Squarespace, Google Forms, Calendly	Cheap and simple.	Win through connected CRM + member app + attendance + payments.

4. Business Model, GTM & Operating Plan

Pricing should be simple enough for gym owners to understand quickly. Avoid too many per-user fees. Owners should feel the product makes life easier, not like they need a finance degree to understand the invoice.

Plan	Price	Best For	Includes	Notes
Starter	\$99/mo	Small gyms, up to ~50 members	Member app, basic CRM, class schedule, QR check-in, announcements, basic payment status.	Good entry plan.
Pro	\$199/mo	Most independent gyms, ~50–200 members	Full CRM, lead/trial tracking, coach notes, attendance dashboard, capacity, member app.	Default plan.
Growth	\$299/mo +	Larger or multi-program gyms	Advanced analytics, retention reports, fight-camp module, expanded support, unlimited members.	ARPA expansion.
Add-ons	Variable	Gyms with extra needs	Website add-on, onboarding/migration, branding, payments, analytics, events/fight-camp modules.	Keeps base pricing clean.

Founder-Led GTM & Operating Model

The early GTM should be founder-led, local, and relationship-driven. OxRound should avoid pretending it is a polished enterprise SaaS vendor too early.

- **Pilot-first:** Validate workflows, language, onboarding, coach usage, and member behavior at G1 Boxing.

- **Founder-led sales:** Visit gyms, speak with owners, demonstrate live product, and show how missed trial follow-up and payment confusion cost money.
- **Niche content:** Create practical owner content around retention, trial follow-up, attendance, youth programs, fight teams, and beginner onboarding.
- **Referral loop:** Offer founding gyms discounted plans or credits for introducing other gym owners.
- **Website add-on wedge:** Many gyms have weak websites — connected website + CRM + trial booking is easier to understand than “software.”

Operating Area	Responsibility
Product & Engineering	Build production-grade app and CRM, authentication, database, QR check-in, class booking, admin dashboard, security, and deployment.
Sales & Customer Discovery	Founder-led outreach, discovery calls, demos, pilot feedback, pricing conversations, onboarding, and customer success.
Customer Success	Hands-on setup, migration from paper/WhatsApp/spreadsheets, coach training, and weekly check-ins during beta.
Metrics to Track	Gyms, MRR, active members, weekly app users, bookings, check-ins, trial conversion, churn, support load.

5. Financial Model, Funding Ask & Use of Funds

The model below is intentionally conservative. The key is to show **believable unit economics** and a clear path from pilot usage to paid adoption.

Milestone	Paying Gyms	Avg Rev/Gym/Mo	MRR	ARR Run-Rate	Strategic Meaning
Pilot Validation	1–3	\$0–\$99	\$0–\$300	\$0–\$3.6k	Proves product works in real gym.
Early Paid Beta	5	\$150	\$750	\$9k	Shows gyms will pay before full polish.
First Revenue Base	10	\$175	\$1.75k	\$21k	Stronger pre-seed conversation.
Local Rollout	20	\$200	\$4k	\$48k	Repeatable sales in Quebec.
Expansion Stage	50	\$225	\$11.25k	\$135k	Clear vertical SaaS signal.
Seed Target	100	\$250	\$25k	\$300k	Enough data for deeper investment.

Funding Scenarios

Scenario	Suggested Raise	Best Use	When It Makes Sense
Lean Founder Build	\$50k–\$100k	Hosting, tools, design polish, legal setup, small contractor help, pilot support.	Technical co-founder can build most product without salary.
Serious MVP Round	\$150k–\$250k	Engineering, UI/UX, QA, security, onboarding, early GTM.	Best balance for building a real product and signing gyms.
Aggressive Pre-Seed	\$300k–\$500k	Small product team, faster roadmap, payments, website add-on, Ontario expansion.	Only after pilot engagement and paid customers are visible.

Use of Funds

Use	Allocation	Purpose
Product Engineering	55%	Build and stabilize MVP, database, CRM, member app, QR check-ins, and security.
Design & UX	10%	Improve mobile experience, onboarding flow, dashboards, and brand trust.
Customer Onboarding & Support	10%	Hands-on setup, migration help, training videos, early customer success.
Go-To-Market	15%	Gym outreach, demos, local events, content, founder travel, website, sales materials.
Legal/Admin/Infrastructure	10%	Incorporation, contracts, compliance basics, hosting, tools, accounting.

6. Team, Milestones, Risks & Investor Thesis

The company requires a founder-led commercial/product operator and a strong technical builder. The early team should stay lean until the product has live gym usage and paid customer proof.

Role	Primary Responsibilities	Why It Matters
Founder / CEO / Commercial Lead	Vision, discovery, gym relationships, sales, fundraising, brand, partnerships, onboarding, product direction.	This business wins by understanding gym owners and selling trust before selling software.
Technical Co-Founder / Head of Product & Engineering	Architecture, database, authentication, CRM, member app, security, deployment, scalability, roadmap.	The product must become reliable enough for gyms to trust with members, classes, and payments.
Shared Responsibilities	Roadmap, UX decisions, pilot feedback, pricing, hiring, investor updates, customer success.	The first 12 months require tight founder alignment and fast learning loops.

Key milestones investors should underwrite: MVP live at G1, **3 paying beta gyms within 6 months, 10 paying gyms within 12 months**, weekly member/coach usage, proof of willingness to pay at \$99–\$199/month, and a credible roadmap for payments, website add-ons, analytics, and combat-sports-specific training modules.

Risk Register

Risk	Why It Matters	Mitigation
Building too much before revenue	Feature-heavy apps burn time before proving willingness to pay.	Build only booking, check-in, trials, payment visibility, and coach/admin usage first.
Gym owners resist change	Owners are busy and used to manual systems.	Hands-on onboarding and clear ROI around missed trials/payments.
Generic competitors copy features	Larger platforms can add some combat sports features.	Win through speed, culture, relationships, and deeper vertical UX.
Technical co-founder capacity	Slow development delays pilots and sales.	Define commitment, vesting, roadmap, and fallback contractor budget.
Payments/compliance complexity	Payments add operational and security risk.	Start with payment status; integrate proven providers before storing sensitive data.
Small initial market perception	Investors may see boxing gyms as too narrow.	Position boxing as beachhead into combat sports and boutique fitness.

Investor Thesis: OxRound combines a real niche, founder-market fit, live pilot access, a visible prototype, and a proven SaaS spending category. The opportunity is not to beat Mindbody feature-for-feature on day one; it is to become the operating layer for combat sports gyms by solving the workflows generic platforms ignore.

7. 90-Day Execution Plan

Month	Product	Commercial	Investor / Company Setup
Month 1	Finalize MVP scope, database, authentication, class schedule, profiles, admin dashboard wireframes.	Interview 10 gym owners/coaches; define top 5 pain points; prepare pilot onboarding plan.	Incorporate/structure company, founder agreement, advisor/investor materials.
Month 2	Build booking, cancellation, QR check-in, attendance dashboard, member list, announcements.	Run pilot setup with G1; collect member/coach feedback weekly.	Finalize funding ask and SAFE/note structure with counsel.
Month 3	Polish UX, payment status, lead/trial tracking, coach notes, basic reporting.	Approach first 10 Quebec gyms; aim for 3 beta commitments.	Share investor update with pilot metrics and beta pipeline.

Bottom line: Raise enough to prove real gym usage and paid adoption — not enough to wander into feature bloat. The first investor bet is execution speed, founder-market fit, and whether a messy niche can become a clean vertical SaaS business.
